

## **SuperLooper Product Notification**

Automated Sciences

May 2016

The SuperLooper image animation viewing tool was discontinued a year ago.

All the old SuperLooper functionality is now part of the Rapid Visualization Tool (RVT) plus much more! This is the primary reason we have now discontinued it combined with the fact that it was too costly to maintain two similar tools and created customer confusion.

We realize the SuperLooper did have the advantage of being able to run on a modest computer system and within a web browser.

Fortunately what used to be aggressive hardware requirements to run the RVT limiting the number of RVT Workstations that could be procured, is now much more modest relative to a typical PC.

So to replace the SuperLooper we will offer both existing and new customers the RVT Workstation with the desired version of the RVT Software on the desired RVT Workstation config at the current list price and then additional RVT licenses and workstations to work on data from the SAME GOES Box at \$3000USD each.

Like most software vendors we are also willing to revive and supply the SuperLooper for a price if a large number of visualization seats are necessary. Although in the past 15 years we have yet to have any customer who has requested more than 4 seats!
